AirVantage—Savings Like Never Before

There's one important ingredient in every kitchen: The air. Trust Gaylord, the kitchen air management specialists, to increase your energy savings, decrease your operating costs and extend your equipment life cycle with the unmatched value of AirVantage.

AirVantage helps you help boost productivity, improve efficiency and enhance your overall working environment.

AirVantage features an easy-to-read high-resolution full-color touch screen panel. It revolutionizes the way you control airflow in your kitchen, providing savings like never before. And it creates a quieter, more comfortable kitchen environment.

AirVantage is pre-programmed for easy system start. It gives you the ability to power down as low as 30%, reduce your fan energies by 25 to 70%, and generate 10 to 50% in overall air savings.

Our unique Smart Read and React technology uses individually optimized, canopy-mounted sensors to detect cooking load changes with improved accuracy and speed.

AirVantage features state-of-the-art learning functions: It auto-calibrates airflow and adjusts to how *your* kitchen operates, providing airflow *when* you need it and *where* you need it.

It's as if you have a 'round-the-clock air-balancing technician: AirVantage's advanced commissioning and unique damper optimization enhances airflow, minimizes exhaust volumes, and maintains capture and containment. The result: optimal energy savings in multiple zones simultaneously.

The robust and maintenance-friendly sensors in the AirVantage system measures the difference in sensible heat *by zone*, not just in a single piece of equipment.

Want real-time energy and operational savings data? It's available on the full-color touch screen or via USB download.

AirVantage interfaces with building-management systems allowing detailed system monitoring. And Gaylord is an industry leader in energy savings technology, contributing toward energy saving and green-building standards.

AirVantage is efficient, cost-effective, easy to use and takes Gaylord's Smart Read and React technology to the next level.

AirVantage: The innovative, smart ventilation solution for your food service operation.
